

Automatic

More Gain From Your Grain

Jim S

Automatic's equipment is simply top notch and has had a big impact on my bottom line.

I highly recommend Automatic!

Mike W

I have been very impressed with the conversion I am getting on my ATG 10000.

Its the best piece of equipment I have ever owned!

Jason K

Working with the Alec has been great. Every question I had was promptly answered.

I couldn't be happier with my purchase!

Building innovative products for the agricultural market since 1925

The Automatic Difference

More Farmers Are Choosing Automatic, one of the most energy-efficient methods of processing all types of feed grains.

Whether you are feeding beef, pork, dairy or poultry, you will get more from your grain with Automatic.

Make 4 bushels do the work of five. Get more milk per cow. Faster, more economical gains. All livestock thrives on rolled grain.

Improved Palatability & Digestibility

It is just like cracking nuts, the roller mill cracks the grain lightly, just enough to break the seed coat without reducing the meat inside to flour. The digestible nutrients can then be assimilated for consistently higher rates of gain. Without cracking, much of the grain will pass through the animal whole.

Avoid Feed Waste & Respiratory Ailments

Dust-free rolled grain will not be “wind blown” out of the feed bunk. Your livestock will eat it all, and they will avoid respiratory problems caused by inhaling “powdered feeds.”

Save Horsepower

Whether you want to roll your grain coarse, medium or fine, wet or dry, Automatic mills require one-third less horsepower than other mills.

Versatility

Roller mills will process corn, milo, oats, barley, and wheat. You choose the particle reduction size best suited for your livestock. Set your rolls and let Automatic do the rest.

Chill Cast Rolls **VS** Automatic Hardened Steel Rolls

Inexpensive Chill Cast Rolls

- Chill cast iron costs less for the manufacturer than hardened steel due to the lower material, energy, and labor costs required to produce finished rolls
- Chill cast iron has poor corrosion resistance, meaning that they constantly need to be resharpened in order to achieve consistent feed quality
- Cast iron easily warps without shattering, this rubber band effect leads to long term negative effects on all working aspects of the mill
- The lifetime cost of ownership is much higher than hardened steel rolls

Automatic High Quality Hardened Steel Rolls

- Automatic Hardened Steel is more expensive because it's better material. Regular maintenance requirements are drastically reduced, saving time and money in the long-term
- Hardened Steel has 1.5 x the modulus of elasticity of chill cast steel, leading to less warping of material on shaft. The entire mill will last longer, providing years of trouble-free operation
- No need for constant resharpening and reworking to mill quality grain
- Harder, stronger rolls that deliver consistent feed quality for years at a lower lifetime cost

Roy Ritter, RKR Feedlot

West Point, Nebraska

Our Automatic 10K Electric mill is an outstanding machine. We use two one-thousand bushel dump pits.

On our biggest day, we process 145,000 bushels through the mill at about 9000 bushels per hour with 25 to 28% moisture.

I no longer dread high-moisture corn season.

ATG10000 Electric

ATG10000 Electric

Features

- Sequential electric start up/shut down
- Electric hopper grates
- Rolls: 14" hardened to 56 Rockwell C
- Quick adjust rolls
- Magnetic grates
- Designed for quick and easy serviceability
- Each basic controlled by an individual motor
- Torsion axle suspension

Specifications

- 10,000 bu/hr capacity
- 350 bushel hopper
- 24" discharge conveyor
- 2-100 HP motors

Dimensions

ATG10000 PTO

ATG10000 PTO

Features

- Electric hopper grates
- Rolls: 14" hardened to 56 Rockwell C
- Quick adjust rolls
- Magnetic grates
- Designed for quick and easy serviceability
- Torsion axle suspension

Specifications

- 10,000 bu/hr capacity
- 350 bushel hopper
- 24" discharge conveyor
- PTO Driven

Dimensions

Beller Feedlot Lindsay, Nebraska

Real World Results

- 3 lbs of additional gain per head
- 1¢ better cost of grain = 64lbs less feed per head
- 4.48% higher grade out on Prime/Certified Angus Beef
- 1.88% better conversion

AE
ATG15000 Electric

ATG15000 Electric

Features

- Sequential electric start up/shut down
- Electric hopper grates
- Rolls: 14" hardened to 56 Rockwell C
- Quick adjust rolls
- Magnetic grates
- Designed for quick and easy serviceability
- Each basic controlled by an individual motor
- Torsion axle suspension

Specifications

- 15,000 bu/hr capacity
- 500 bushel hopper
- 30" discharge conveyor
- 3-100 HP motors

Dimensions

AE CSU 1000

Features

- Two-stage reduction process for maximum control
- Top rolls are coarse for primary reduction
- Bottom rolls are fine to produce the exact amount of reduction required for the job
- One point adjustment sets the gap between the rolls to control particle size.

Rotary Mills

Features

- PTO or Electric
- Use less feed
- Increased milk production
- High RPM cylinder set in a drum with shear bars to chop corn
- No screens - no plugging
- Control plate controls the rate of corn entering the mill
- Milled corn is blown out of the bottom of the mill to auger into a cart or mixer

The Rotary Mill Will Grind:

- Dry ear corn
- Dry shell corn
- High-moisture shell corn
- Milo
- Wheat
- Soybeans
